

## DxO Optics Pro v5.3.1 Release Notes

### Windows (build 7301)

#### Supported Systems

---

- Windows XP (32 and 64 bits)
- Windows Vista (32 and 64 bits)

#### Installation

---

- The .NET 3.5 SP1 Framework will be installed if it is not already installed on the machine (it may take several minutes).
- Installing the latest updates of Windows is recommended before installing the application.
- A reboot is required.

#### New features

---

- New supported camera bodies
  - Canon 50D
  - Nikon D90
- DxO FilmPack v2 (may be used in demo mode for 21 days. Must be activated to be used beyond the 21 days trial period.)
  - 27 new film renderings (color and grain) have been added
  - 8 color filter have been added
  - Note: Owners of DxO FilmPack v1.2 and DxO Optics Pro v5.3 (or earlier) can upgrade to DxO Optics Pro v5.3.1 and still enjoy all the benefits of DxO FilmPack v1.2 features within DxO Optics Pro v5.3.1.
- About 40 new DxO Optic Correction Modules available

#### Third party software compatibility

---

- Photoshop
  - The DxO Optics Pro plug-in is compatible with Photoshop CS3 and CS2.
- Lightroom
  - Support for both Lightroom 1.4 and 2.0

#### Known limitations

---

- Canon 50D body and Vignetting: The Canon 50D body performs vignetting correction for JPEG images. DxO Optics Pro 5.3.1 does not take into account this correction performed by the camera body: DxO Optics Correction Modules have been made from shots with vignetting body correction disabled. For an optimal correction of vignetting by DxO Optics Pro, we recommend to disable the in-camera body vignetting correction while shooting.
- License transfer is not allowed after a manual activation.
- Preset and sidecars are not cross platform compatible (Mac/Windows)
- Photoshop can only import a limited number of images at the same time.
- Plug-in incompatible with Photoshop Elements 6
- Lightroom 2.0 smart collections are not accessible from DxO Optics Pro
- Application as external editor of Lightroom 64 bits not supported

### **Known bugs**

---

- Cursor goes to beginning when renaming a preset with special characters
- No error message in DxO Optics Pro as Lightroom external editor for ".psd" images
- Right-click in file system does not select item
- Thumbnails disappear from Filmstrip if changing system font size
- "Before" image can be cropped in double display mode
- Filmstrip content filter not applied properly on missing links
- After fixing paths of missing files, project needs to be reloaded

### **Bug fixes over v5.3.1 build 7300**

---

- In some rare cases the application hung when clicking in the Review tab images list
- In some rare cases the application hung when simultaneously using space key and click (pressing the Esc key could be used to retrieve the application)
- When a new version was available, "Check for Update" downloaded the new installer and then crashed ("Check for Update" could be run a second time to properly launch the new installer).

### **Bug fixes over v5.3**

---

- Better color control on burnt image's area of Canon 40D pictures
- In the Detail / Grain palette, changing grain size was modifying improperly the Intensity (Intensity value was too small)

## **Macintosh (build 7302)**

### **Supported Systems**

---

- Mac OS X.4 (Tiger)
- Mac OS X.5 (Leopard)

### **New features**

---

- New supported camera bodies
  - Canon 50D
  - Nikon D90
- DxO FilmPack v2 (may be used in demo mode for 21 days. Must be activated to be used beyond the 21 days trial period.)
  - 27 new film renderings (color and grain) have been added
  - 8 color filter have been added

- Note: Owners of DxO FilmPack v1.2 and DxO Optics Pro v5.3 (or earlier) can upgrade to DxO Optics Pro v5.3.1 and still enjoy all the benefits of DxO FilmPack v1.2 features within DxO Optics Pro v5.3.1.
- About 40 new DxO Optics Correction Modules available

### **Third party software compatibility**

---

- Photoshop
  - The DxO Optics Pro plug-in is compatible with Photoshop CS3 and CS2.
- Lightroom
  - Support for both Lightroom 1.4 and 2.0

### **Known limitations**

---

- Preset and sidecars are not cross platform compatible (Mac/Windows)
- License transfer is not allowed after a manual activation
- Photoshop can only import a limited number of images at the same time.
- Plug-in incompatible with Photoshop Elements
- Lightroom 2.0 smart collections are not accessible from DxO Optics Pro
- External editor of Lightroom 64 bits not supported

### **Known bugs**

---

- Some thumbnails are sometimes not oriented properly in the Film Strip
- Navigation palette behavior unreliable in floating mode
- Proof this: processed images have no green icon
- EXIF information not displayed until module ambiguity is resolved
- Multiple selection in file browser set to columns mode does not work

### **Bug fixes over v5.3.1 build 7301**

---

- Application
  - "Check for Update" was malfunctioning

### **Bug fixes over v5.3.1 build 7300**

---

- Application
  - The "activate DxO FilmPack v1" menu is now available from the DxO Optics Pro v5 menu
  - Focusing distance slider now works properly
  - The "Recent project" menu has been removed. This menu could cause the application to freeze. When the initial problem is solved this menu will be available again.
  - Color rendering: sepia options now available if a black and white film is selected
- Installation
  - Fix of installation error that could occur when configuring third party software.

### **Bug fixes over v5.3**

---

- Better color control on burnt image's area of Canon 40D pictures
